

Bioengineering Design Course

 Tannas Conservation
Services Ltd

This two day course will have both office and field components that focus on demonstrating designs and construction techniques in bioengineering projects within the prairie and parkland regions. The use of native species will also be a strong focus of the course.

We'll start right from "the ground up" and show you examples of many of the techniques, as well as discuss potential issues, successes and not-so-successes associated with different designs around Calgary.

Dates: May 1 and 2, 2017

Location: Calgary, AB

Instructors: Steven Tannas, Ashley Easton

Contact: eileen.tannas@esrseeds.com
